

Fields of Data

I kept my data, on a piece of card
Inside a filing cabinet
It took me so long, to find anything
In the manual data fields

Paper databases are so frustrating
They're slow and old and fragile
Move it to PC there are benefits
Leave the manual data fields

So I created a new database
On my new computer
It's expandable and adaptable
Computer data fields

I can query things, that means
search for them
Just using some parameters
I create reports, for paper or
screen
To display the data fields

It's not easy to create fields
Need to select the data types
Could be number, text or Boolean
To create your data fields
To create your data fields

Many years have passed, for my
database
It now has validation
And I back it up almost every night
Keeping safe the data fields
A unique ID, set as the key field
Identifies the items
data protection, with a strong
password
keep secure the data fields
yes we love the data fields
records full of data fields
